ABSTRACT OF THE DISCLOSURE

SHARING MESSAGING DEVICE INFORMATION AMONG NETWORK USERS

A method, system and program for sharing message device information among multiple devices participating in network communications in an electronic system are provided. Device information for each device utilized by a user to participate in a messaging system is determined and transmitted to a messaging server. The device information is then filtered according to authorization preferences. Next, the filtered device information is distributed to the devices for multiple users participating in the messaging session, such that each of the multiple users is enabled to monitor each other device utilized by the other particular users during the messaging session.
